# **I. System Documentation**

## **1. System Proposal**

Currently the VCU Joint Engineering/Business Task Force is considering an information system that will enhance the value and recognition of corporate affiliates of the University. Dr. Redmond has offered the opportunity for me to participate in the development of this project in conjunction with Dr. Weistroffer, Mr. Saunders, and Dr. Wynne during the spring 2006 semester of Projects in Information Systems. My participation in the definition, planning, integration, and implementation of this information technology project will complement my area of study in the Information Systems department.

Interactive touch screen monitors have been selected and purchased by the University. Currently, the plan is for one large interactive touch screen to be installed on the wall directly across from the fourth floor elevators of the Business building, with an additional large display with a secondary interactive touch screen to be installed on an empty wall adjacent to the third floor elevator. Both of these interactive systems will be provided for students, professors, and visitors to raise awareness of the Universities corporate affiliates.

These systems, code name Reach Out VCU, will scroll specialized, approved content such as marketing, company logos, employment opportunities, and alumni testimonials. A limited level of interactivity will allow users to navigate throughout predefined pathways for company and university specific information. When the touch screen is not in use, motion graphics will be rendered on a portion of the screen to highlight the features listed above. Additionally, a portion of the screen space can be reserved for scrolling University news.

A content management system will be integrated with the application software powering the interactive displays. Authorized users such as recognized corporations will be able to create draft pages for their special interest, which can then be approved by administrative users with the appropriate authority. These approved entries will then 'go live.'

Information may be requested through future integration with card reader hardware that links to the VCU One Card system for supplying a users contact credentials quickly and accurately to the appropriate corporation, department, or Career Center representative. This portion of the program may not be implemented by spring 2006.

## 4. User Interface Mockups

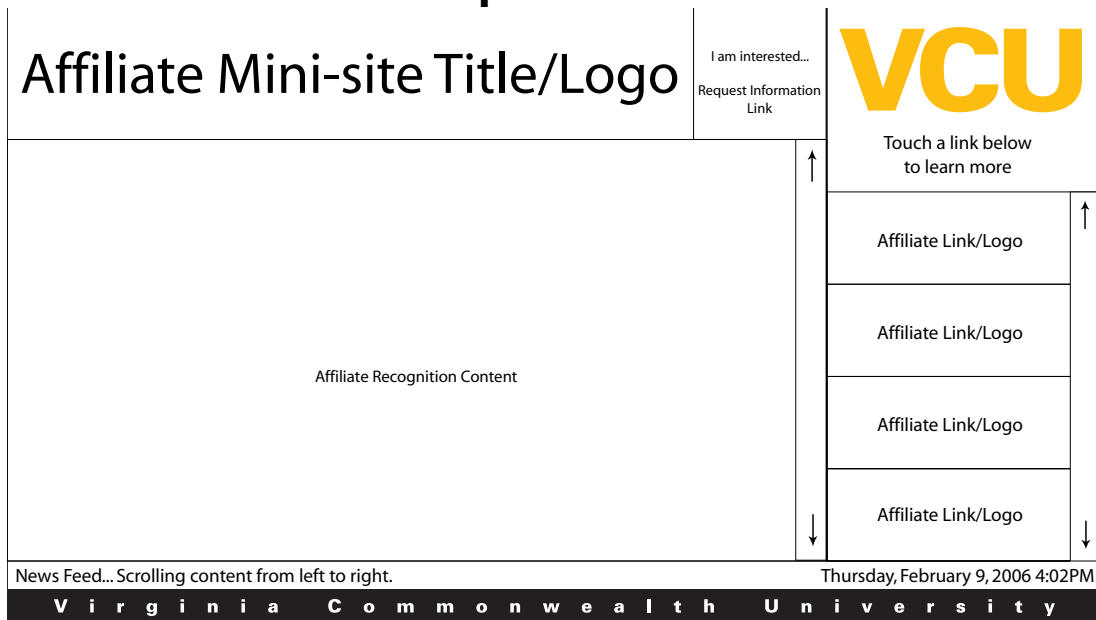

Figure 4: Affilliate Outreach System User Interface

Figure 5: Affilliate Recognition System User Interface

## 5. Project Scope

### **(a) Affiliate Content Management System**

This system allows users to create and manage content for specific affiliate sites.

- Administrators create, update, and delete Affiliate Presence within the system.
- Administrators create, update, and delete Authors for an Affiliates Presence.

#### **(i) Future Expansion**

- Authors can be either Editors or Contributors.
- Contributors to an Affiliate Presence will Post Draft entries within the system and then transfer these entries to an Editor.
- Editors will Publish Entries that have been submitted to by Authors for publication.

### **(b) Affiliate Recognition System**

This system will run when the kiosk is idle, presenting specialized information from Affiliates.

- The Administrator can Manage Affiliate Presence to enable or disable Affiliates from being present on the attract loop, and set the amount of time an Affiliate Presence is displayed on screen.
- Authors designate which entries in their Affiliate Content Management System will be supplied to the Affiliate Recognition System by selecting the appropriate Category for their entry.

### **(c) Affiliate Outreach System**

This system allows users of the kiosk to Browse Affiliate Presence on the display.

- If a User is interested in a certain Affiliate Presence, they may select that Affiliate from the navigation panel.
- When a User selects an Affiliate Presence, the content panel of the display will be loaded with the contents of the Affiliate Content Management System.
- If a user would like to submit their personal information to the Affiliate presented on screen, an option to manually enter their email address will be available.
- A VCU sponsor will receive the interested Users email address who will notify the appropriate Affiliate contact.

#### **(i) Future Expansion**

- If a user would like to submit their personal information to the Affiliate presented on screen, an option to swipe their VCU card will be available.

## 7. Concept Overview

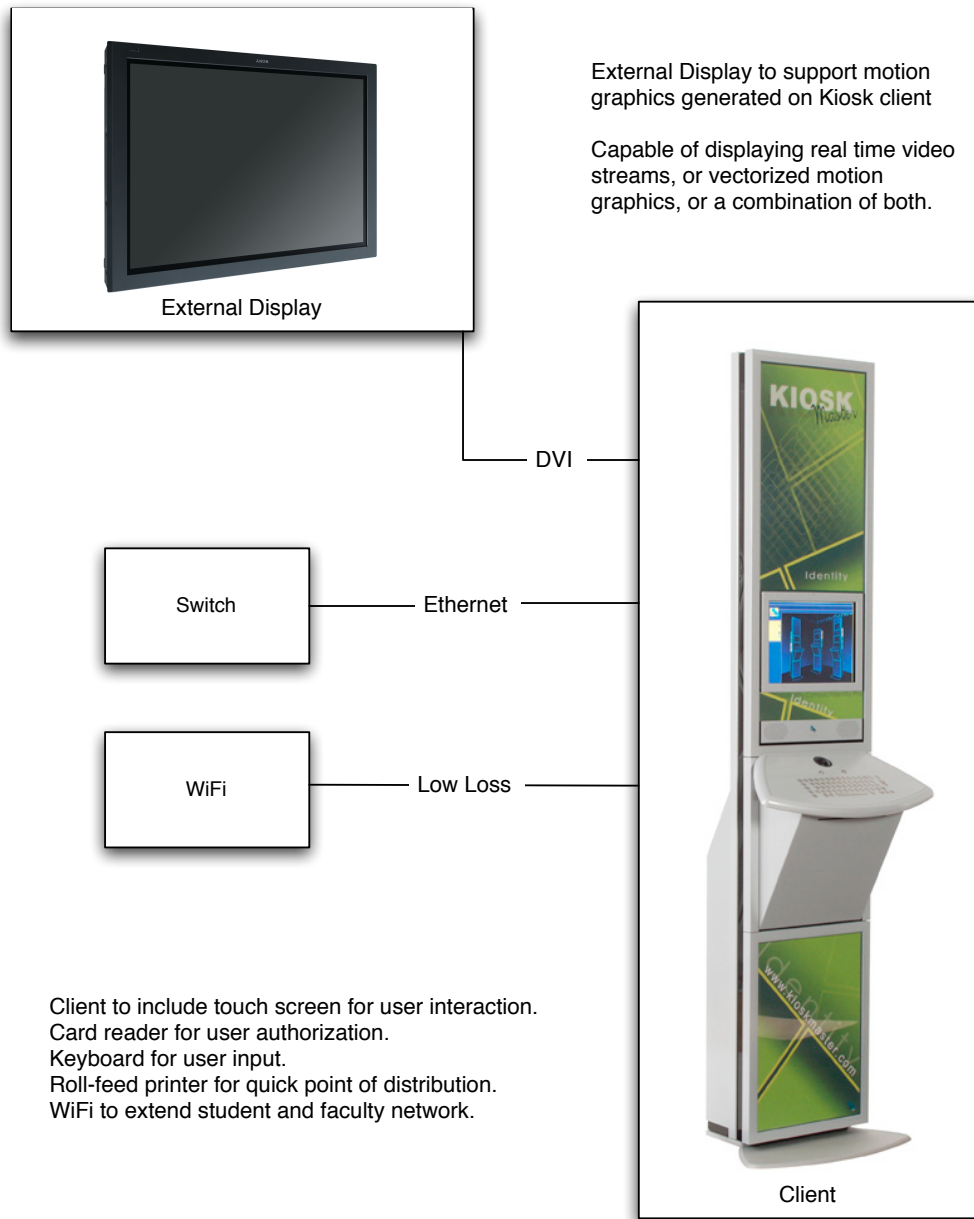

Figure 7: Concept Overview

## **8. Development Methodology**

### **(a) Xcode**

Apple provides a suite of tools along with an integrated development environment called Xcode. Xcode was used to create a Mac OS X universal binary for the Affiliate Outreach system that runs natively on PowerPC and Intel-based Macintosh computers.

### **(b) Quartz Composer**

Apple provides a development tool called Quartz Composer along with their distribution of Xcode. Quartz Composer is a visual programming environment that brings together a number of technologies like OpenGL and RSS. The Outreach and Recognition systems were created in this environment.

### **(c) Really Simple Syndication (RSS)**

RSS is an XML (eXtensible Markup Language) format for the delivery of time-based streams of content called “feeds.” These RSS feeds are created for each category of content provided by the Affiliate.

### **(d) Movable Type**

Movable Type is a weblog publishing platform used manage content and deliver it via RSS. Affiliates can directly manage their ‘weblog’ entries and categories which are fed to the Outreach and Recognition systems.

### **(e) Mac OS X Server**

Apple’s Mac OS X Server was chosen as the web hosting platform. The Apache web server was used along with Perl to implement the Movable Type content management system.

## **II. User Documentation**

### **1. Description of Functionality**

#### **(a) Content Management System**

The content management system is powered by the Movable Type publishing platform. Movable Type supports unlimited weblogs, one is created for each Affiliate. Each Affiliate site is setup with categories of content the Users may navigate to. Each new entry posted to the system is ascribed to one or more categories.

#### **(b) Outreach System**

The Outreach System is a Mac OS X screen saver. This composition is intended to attract users to the screen for interaction with the system. Each Affiliate Outreach System is configured to a specific RSS feed.

#### **(c) Recognition System**

The Recognition System is a Quartz Composer document. This composition is intended to provide users of the system a way to get specific information about an Affiliate that may be of interest to them. Each Affiliate composition is configured to five category-specific RSS feeds that provide the paths of navigation.

## **2. User Instructions**

### **(a) Content Management System**

The content management system is powered by the Movable Type publishing platform. Details on the use of Movable Type can be found @ <http://www.movabletype.com>

Categories are created for entries. Each Affiliate site should have 5 categories that provide the navigation links for the Recognition system.

### **(b) Outreach System**

The Outreach System is a Mac OS X screen saver. The composition is located in the ~/Library/Screen Savers/ directory. By opening the System Preferences on the Mac OS X client and selecting the Screen Saver pane, one can adjust the time until the screen saver starts and ensure the proper screen saver is selected.

Open the composition with Quartz Composer to adjust the RSS URL that feeds the motion graphics content for the screen saver. You may also adjust the news feed RSS URL that provides content for the lower banner.

### **(c) Recognition System**

The Recognition System is a Quartz Composer document. A QuartzComposerPlayer application was installed into the /Applications directory. The Recognition System composition is located in the /Users/Shared/Compositions directory. By opening the QuartzComposerPlayer on the Mac OS X Client and selected the composition, one can load the appropriate Affiliate composition.

Open the composition with Quartz Composer to adjust the five RSS feed URLs for the navigation links. You may also adjust the news feed RSS URL that provides content for the lower banner.
